Scenario: Cascade of Global Events Expected in the Case of Decreasing Sunspot Activity

- Decreasing Solar Sunspot Activity
  - Decrease in Ultraviolet Light Output from the Sun
  - Cooling Global Temperatures
    - Decrease in Global Food Production
    - Decrease in Chlorophyll CO2 to O2 Conversion
    - Increase in Atmospheric Carbon Dioxide (CO2) Concentration
  - Decrease in Global Plant/Algae Photosynthesis
    - Decrease in the Ionization of H/He in the F-Layer of Earth's Ionosphere
    - Worsening in Overall Shortwave Radio Reception
